BeGrainSafe

Grain entrapment is extremely dangerous for the victim and the rescuers. Firefighters must use specific safety and rescue procedures to increase their chances of a successful rescue, while keeping members of their department safe. That's why CASA has developed the following rescue course for firefighters.

Firefighter Grain Rescue Training Course

This training program incorporates both classroom theory and practical training. It is intended to prepare firefighters to respond to a grain entrapment incident on-farm or at a grain handling facility.

NOTE: All course participants are required to complete Introduction to Grain Handling and Storage Hazards (free, online course available at casa-asca.ca/begrainsafe) prior to taking this course.

Course Details

- In-person Course with Master Trainer
- Approximately 8 to 16 hours (duration dependent upon skill level of participants)
- Continual evaluation throughout course
- Upon completion of this course, a Certificate of Completion will be provided.

The BeGrainSafe Trailer is required for this course.

Course Topics

- Identification of grain incidents
 - ~ How they occur
 - ~ Common injuries
 - ~ Types of entrapments
- Grain handling and storage facilities
 - ~ Hazard identification
- Regulatory standards
 - ~ NFPA/CSA/SWP
- Confined space and fall protection considerations
- Hazard analysis and risk assessment
- Equipment required
- Practical rescue training
- Bin breach training (available upon request)
